Opendium

The Internet has changed.

Has your network changed with it?

Real-time filtering for today's Internet

The Internet is made up of an ever-increasing number of dynamic websites. Filtering systems must be able to react instantly to new threats and provide you with the information you require in order to keep your network secure.

The Iceni systems from Opendium are designed to give you complete control of your internet connection providing advanced filtering and firewalling of all internet traffic, virus and spam control and also providing services such as calendaring and email.

The new Iceni server makes managing your security easier than ever with a hierarchical configuration tree enabling you to specifiy global filtering rules and then refining your controls on a per-group basis. Integration with Active Directory, Novell NDS and OpenLdap systems means that the management overhead is minimal and the reporting will make sure you are up to date with everything that is happening on the network.

Time-based controls

Our "Time periods" system allows you to define any number of different time periods which can be used to alter the way the control systems work. You can for example set up a time period for lunchtime which allows social networking, and another period two hours every week on a wednesday afternoon to allow the art class more relaxed filtering enabling them to explore life-drawing. The Iceni systems allows ultimate flexibility.

Your network, under your control

The Iceni web filter utilises a powerful web site categorisation engine which analyses even encrypted HTTPS content in real time, and comes with predefined categories which receive regular automatic updates. You can modify categories and alter the filtering from anywhere in the school, allowing you to instantly respond to any issue that might arise which is essential for the smooth running of your lessons and the safety of your users.

Safe Search integration

Iceni's web filter also integrates with the Safe Search feature offered by all of the major web search engines for both http and https searches.

Extensive auditing and reporting capabilities

Iceni's reporting system offers live statistics of recent network traffic, including filtered users and web searches. The Iceni will produce regular automated reports which instantly give you an overview of your network. You can analyse any aspect of the system, drilling down to the finest detail, including the ability to review thumbnails of the images they have been browsing. Iceni gives you ultimate control allowing you to understand exactly how your Internet connection is being used, down to the smallest detail.

Stateful Firewall	Directory Intergration	Email Services	Proactive Filtering	Live Status	Safe & Secure

Opendium

Iceni software delivers...

- **Caching and Quotas**

It is important to optimise, manage and understand your users' web traffic. In addition to the auditing capabilities, Iceni includes quota management and a web cache to effectively reduce your network's Internet bandwidth requirements.

- **Multi-platform and BYOD support**

With built-in 'bring your own device' support, you can be sure that the Iceni filtering and auditing functions protect your users whatever device they are using, whether the device belongs to the school or is something they have brought from home.

- **Anti-virus and anti-spam**

The optional email plug-in includes a comprehensive anti-spam system, utilising multiple technologies to ensure that as much junk mail as possible is removed from your system with the minimum of false positives. Combined with the built in anti-virus system, this provides an excellent defence for your network, either stand alone or integrated with your existing mail server.

- **Mail content filtering**

With so much inappropriate content being sent by email, it is important to be able to control and block emails which would cause offence or upset. The Iceni mail filter uses deep inspection technology to analyse each component of an email, including any attachments, to help prevent malware, inappropriate content and bullying.

- **Integrated web applications**

The Iceni email plug-in comes with all of the functionality you would expect from any email system, including a web mail interface, address book and calendaring.

- **IPv6 ready**

There is increasing pressure to roll out IPv6 support onto networks well within the life time of any systems being purchased today. Iceni has mature support for IPv6, giving you one less thing to worry about.

- **World class customer support**

When the chips are down you need the best technical support that you can get. The Opendium team is highly experienced in network and Internet troubleshooting and gets to the bottom of a problem fast. Our engineers excel at explaining their diagnoses and solutions and can even liaise with other suppliers on your behalf.
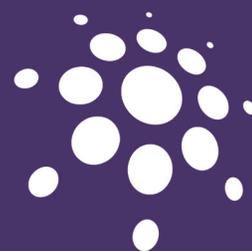

With Opendium you are in safe hands

*"Being a boarding school it is **imperative** that our children are **protected** 24 hours a day. Our Iceni server monitors and reports on each individual user's activity, **alerting** us to any possible issues and providing the tools we need to make sure our students are **safe** both in and out of the normal school day."*

- Dave Hill, IT Systems Manager
Sexey's School, Bruton, Somerset

*"Opendium have been **supporting** us and our network operations for many years. Their technical knowledge and skills are of the **highest level** and the **consistent quality** of their advice is **completely reassuring**. We know we are in **safe** hands when their support team are on the case."*

- John Willetts, Head of ICT Services
Sherborne School, Sherborne, Dorset

Having worked in the education sector for many years we recognise that schools and colleges not only need top quality software that will fulfil their needs, but that it must be backed up by excellent technical support. To this end Opendium was formed, and has been serving this sector since 2005 with offices in South West England and South Wales. We pride ourselves on working hard to understand your needs, on having the know-how to meet the most complex technical challenges, and on being able to get the the heart of any issue quickly, avoiding unnecessary downtime.
